In this presentation the Danish National Network for Nanotechnology (NaNet), the nanotechnology scene and especially the Danish focus areas on nanotechnology will be introduced. Denmark is a country of 5.2 million people with a very high scientific, technological and financial investment in new technologies and corresponding infrastructure. Researchers as well as industrial staff have the choice on a wide variety of networks all aiming to attract industry-academia collaboration. Innovation and product development in small and medium sized companies is strongly encouraged. NaNet is one of the key networks that acts at the forefront in nanotechnology outreach to the industrial public.
